Selection for Research training

Tehkeek International received more than 200 applications for this training program, out of which 40 applicants were selected. The selection was purely based on the research interests of applicants and the recommendations from the board of research cell of Tehkeek International.

The selected applicants have been sent an email about their selection and registration processes. However, they are advised to register at the earliest so that their serial number will be generated, which will be based on the final registration submission. Your experience certificate, discussion appointments, or rebuttals via online classes will be based on your serial number and for that cause, your early registration will put you in front. Further, it is to bring the following points into your consideration:

1. There will be online lectures for the first month, delivered by the training coordinator, and guest lectures.
2. There will be online motivational lectures in the second month as well as group discussions.
3. Besides the lectures, the applicant can also start the discussion about the paper writing or the execution of any research, however, it will depend on the will of the applicant.

The communication for this program will start on **10/01/2023** and the training will officially begin on **15/01/2023**.

Note: This training program is intended to enhance research skills among students and scholars. The selected applicants are requested to gain the maximum benefits from this program. Please feel free to contact Dr. Ayaz Mohmood at 9797264162 if you face any difficulties during the final registration.
